IMPROVED HEARING IN NOISE

When you choose a hearing aid, you expect it to live up to your special needs and preferences.

For many hearing aid users, their greatest wish is to improve their hearing in noisy situations.

The AIKIA™ hearing aid series features the latest exclusive Widex Integrated Signal Processing™ technology, which delivers three key benefits in noisy places – detailed sound, flexible response and full automation. AIKIA's Dynamic Integrator™ ensures that all functions are co-ordinated to provide optimum performance – instantly, smoothly and every time.

As an AIKIA user, you will discover a wide range of advantages that you will not find in any other hearing aid in its class. The features in AIKIA help to keep your life in balance.

AIKIA™ FOCUSES ON THE DETAILS

The extremely detailed sound analysis system within an AIKIA™ hearing aid means:

- ▼ Better speech intelligibility, even in noisy surroundings.
 - ▼ Optimum sound quality, no matter where the sound comes from.
 - ▼ Annoying feedback whistling is prevented.
- ▼ Particular listening situations can be recorded as a "snapshot" using the Sound Diary feature with data logging, for later review by your hearing care professional.

AIKIA also makes it easier to speak on the telephone.

AIKIA™ IS FLEXIBLE

With its highly flexible sound processing system you will benefit from:

- ▼ Better comfort, because AIKIA's Speech Intensification System attenuates noise and emphasises speech.
- ▼ Better speech intelligibility thanks to the AIKIA™ Locator, which focuses on the sounds you want to hear – no matter where they come from.
- ▼ Improved audibility of soft speech and speech at a distance.

AIKIA™ IS FULLY **AUTOMATIC**

The AIKIA™ optimisation system automatically gives you:

- ▼ Long battery life thanks to Widex EcoTech II technology. AIKIA has many advanced components, so this system always ensures minimal power consumption for less frequent battery changes.
- ▼ Precise fitting. AIKIA's great flexibility and precision makes it easier to match to your individual needs and preferences.

- ▼ Customised programs adapted to your individual lifestyle. The individually adapted "master" program can be enhanced with up to three extra programs for use in special situations.

AIKIA™ – COMPLETE RANGE, STYLES AND ACCESSORIES

The AIKIA™ series has a hearing aid to suit everyone's lifestyle. All models are state-of-the-art and manufactured to Widex' renowned quality standards. The range offers everything from super-discreet CIC (completely-in-canal), ITE (in-the-ear) and BTE

(behind-the ear) models of various amplification strengths, as well as an open fitting option.

Easy and discreet operation of your AIKIA aid is further ensured with the help of the optional RC3 remote con-

trol. AIKIA behind-the ear aids are available in several modern colour options, and SCOLA FM communication devices can be connected.
